An engineer from the Louvain School of Engineering and PhD in applied physics from Stanford University, Jean-luc Doumont now devotes his time and energy to training engineers, scientists, business people, and other rational minds around the world in effective communication, pedagogy, statistical thinking, and related themes. With his rational background, he approaches communication in an original, engineering-like way that contrasts sharply with the tradition of the field, rooted in the humanities.

Monday, Nov. 16
5:30 PM - Anderson Hall 117
Dinner will be served following the talk.
